Description	Automating file updates in Python
Tool(s) used	Python
The 5 W's	<p>Capture the 5 W's of an incident.</p> <ul style="list-style-type: none">● Who caused the incident? No specific individual; the incident refers to the need to update an allow list file containing IP addresses.● What happened? IP addresses were removed from the allow list file.● When did the incident occur? During the execution of the Python script on 3/28/2024.● Where did the incident happen? In the context of file management within a computer system.● Why did the incident happen? The incident occurred as part of an automated process to update the allow list file, removing specified IP addresses.
Additional notes	Additional notes: The automation of file updates using Python has streamlined the management of the allow list, reducing manual effort and potential errors in the process.
